## Transmission gas compression cable

The above image demonstrates a Transmission gas compression cable being worked on.

The space between the steel pipe and the three cores are filled with high pressure gas. There are a few Transmission circuits still using high pressure gas, however more recently the steel pipes are utilised to contain a three core cable filled with oil. Utilising the steel pipes in this manner leaves a slight air gap between the steel pipe and the Transmission cable. To progress a Transmission underground cable/overhead line enquiry contact ScottishPower call centre on 0845 273 4444. Cable record enquiries are to be directed to ScottishPower Data Management section on the telephone number below.

All Cable Record enquiries should be addressed to:

SP Energy Networks (North)  
Data Management
