

Work is now underway to improve the electricity network in the Tregele & Cemlyn areas of Anglesey

As part of the wider enabling works for Wylfa Newydd, SP Energy Networks Networks is diverting the existing underground cables, as well as removing ten spans of overhead conductor.

We are working in closely with both Horizon Nuclear Power and the Isle of Anglesey County Council to ensure any disruption to local residents and visitors to the area is kept to a minimum.

We do not intend to interrupt any electricity supplies to our customers in the area for these diversion works.

Our programme is scheduled to start from October 2015 and continue through to the Autumn of 2016

Keeping you up to date

We intend to provide monthly updates in this format as well as providing an overview of our works on our website:

www.spenergynetworks.co.uk

Proposed Programme

There are two stages to the works:

Firstly, we will excavate a trench, install ducting and reinstate the route.

The second stage involves excavating joint bays approximately every 600m, then to install the 132,000 volt cable between each of the eight joint bays and undertake the jointing to connect the sections of cable together along the route.

The duration of works in each bay is scheduled to last up to 8 weeks.

Whilst our mains works in public will continue through until Easter 2016, the overall project is schedule through to Autumn of 2016.

What to expect

The above map details the planned cable route from Nanner Lane (point A above) and then on to the A5025 towards the Cemaes Bay area (point B above).

Our works are programmed to start from October 2015, initially on the A5025 in the area of the existing access road to Wylfa and the Nanner Lane area.

Please note that our latest programme is subject to final confirmation. If in the event of changes, we will notify you as soon as we can.

Traffic in your area

Whilst we will endeavour to minimise disruption to local residents and stakeholders, as we will be excavating in the public highway, we will be using traffic management such as traffic lights to safeguard both road users and our working colleagues.

We would therefore request that any signage and warnings are respected in order to maintain the safety for everyone in the area

Finally, please be aware that local residents may experience an increased presence of our vehicles in your area.
