## HISTORIC ENVIRONMENT ASSESSMENT METHODOLOGY

## APPENDIX 9.1

### HISTORIC ENVIRONMENT ASSESSMENT METHODOLOGY

#### 1.1 INTRODUCTION

1.1.1 This section outlines the technical methods used to determine what changes to the baseline are likely to occur as a result of the Proposed Development and sets out the significance criteria which will be used moving forward in to the Environmental Statement (ES) stage.

##### Assessment guidance and methods

1.1.2 The preliminary historic environment assessment is being undertaken in broad accordance with the method set out in DMRB Volume II Section 3 Part 2 HA 208/07<sup>1</sup>, which complies with the requirements of the Overarching National Policy Statement for Energy (EN-1)<sup>2</sup>.

1.1.3 The following guidance documents are considered directly relevant to the historic environment assessment and will be reviewed and applied to the assessment:

- Historic England Good Practice Planning Advice Note 2: Managing Significance in Decision-Taking in the Historic Environment<sup>3</sup>;
- Historic England Good Practice Planning Advice Note 3: The Setting of Heritage Assets<sup>4</sup>;
- Historic England Seeing the History in the View<sup>5</sup>;
- Historic England Conservation Principles, Policies and Guidance<sup>6</sup>, and
- Codes, Standards and Guidance documents by the Chartered Institute for Archaeologists, the regulatory body for the archaeological profession, including:
  - Standard and guidance for commissioning work or providing consultancy advice on archaeology and the historic environment<sup>7</sup>;
  - Code of Conduct<sup>8</sup>, and
  - Standard and guidance for historic environment desk-based assessment<sup>9</sup>.

1.1.4 Table 9.1.1, which is adapted from Table 1 of Shropshire Council's Historic Environment SPD, presents the relevant policy and legislation for relevant designated assets within the study areas.

<sup>1</sup> Highways Agency (2007), Design Manual for Roads and Bridges Volume 11, Section 3 Part 2 Ha 208/07

**Table 9.1.1**
**Designated Heritage Assets and Relevant Legislation and Policy**

Type of designated Heritage Asset	Asset Grade	Asset Significance	Relevant Legislation	Protected in planning process
Conservation Areas	n/a	National or Regional	Planning (Listed Buildings and Conservation Areas) Act 1990	Section 12 of NPPF, specifically paragraphs 128, 132, 133 and 134  Shropshire Council Core Strategy, Policies CS6 and CS17
Listed buildings	Grade I Grade II* Grade II	National ↓ in descending order of interest	Planning (Listed Buildings and Conservation Areas) Act 1990	
Registered Parks and Gardens	Grade I Grade II* Grade II	National ↓ in descending order of interest	National Heritage Act 1983	
Registered Battlefields	n/a	National	National Heritage Act 1983	
Scheduled Monuments	n/a	National	Ancient Monuments and Archaeological Areas Act 1979	

**Assumptions and Limitations**

1.1.5 A number of assumptions and limitations are made in relation to the information presented in this chapter of the PEIR. These reflect the evolving nature and preliminary stage of the Proposed Development:

- All conclusions and assessments at this stage are preliminary. The baseline data in this PEIR is primarily based on desk-based research using data gathered from selective sources to characterise the known historic environment resource within the Project Boundary and wider study areas. The potential for as yet unknown heritage assets with archaeological interest within the Project Boundary has not yet been fully assessed, due to ongoing data gathering and planned field surveys. This potential will be assessed and reported in more detail in the Desk-Based Assessment and other technical appendices and the potential effects of the Project on this resource will be fully assessed and reported in the ES. Preliminary assessment of the potential for as yet unknown assets to be present within the Project Boundary, based on the location character and extent of known assets, has however been outlined in the PEIR.
- All assessment work has and continues to apply a precautionary principle, in that where information is limited (in terms of the development proposals or potential change to the significance of heritage assets), a realistic worst-case scenario is assessed. This includes additional or different historic environment effects arising from potential deviation within the Order Limits.
- The PEIR focusses on heritage assets which would experience potentially significant effects. Assessment is made of whether or not a potential effect is likely to be significant without categorising into defined thresholds (e.g. moderate or major). The work involved to provide this additional level of detail is still ongoing and will be provided in the ES.

---

## Baseline Data Gathering and Forecasting Methods

### Sources

- 1.1.6 This chapter has been prepared through desk-based studies within a study area extending 5km either side of the DOL of the proposed overhead line using the following sources:
- National Heritage List for England, an online searchable spatial database of designated heritage assets (excluding conservation areas);
  - Shropshire Council's Conservation Areas Designation Plans;
  - Shropshire Council's Historic Environment Record (SHER): This is a resource covering all aspects of the historic environment in the historic county of Shropshire. The resource includes a relational database linked to GIS mapping, indexes of available 'sources' held by the HER and by other organisations, and supporting collections of primary and secondary information.
  - Shropshire Historic Landscape Characterisation Project, and
  - Shropshire Historic Farmsteads Characterisation Project.
- 1.1.7 Further desktop information which has been reviewed includes Ordnance Survey (OS) data, Google Earth Pro and stakeholder feedback.

### Field Surveys to Date

- 1.1.8 Site visits undertaken in summer 2016 and summer 2017 a) assessed the extent of settings of the higher value heritage assets and b) informed the initial characterisation of the nature of visual impact arising from the Proposed Development.

### Future Baseline

- 1.1.9 The historic environment is dynamic and our knowledge of it is constantly evolving. Because of this, consideration is given by this assessment to how the historic environment may change in the future irrespective of the Proposed Development. There are several ways in which the historic environment future baseline conditions could differ from current baseline conditions. For example, if an asset's designated status is altered or any, as yet unknown heritage assets with archaeological interest, are identified through third party (e.g. local archaeology groups) surveys within the DOL. However, as baseline data gathering included consultation with the relevant statutory and non-statutory consultees responsible for designations and for dissemination of third party survey data, the likelihood of either circumstance occurring is low and, in any event, would not necessarily alter the assessment of effects undertaken, as this has been undertaken on a realistic worse-case basis. Therefore, the baseline conditions reported in this chapter are taken to also represent future baseline conditions (at the time of construction). The mitigation measures proposed below will be subject to on-going discussion with the relevant consultees, and, in the unlikely event that the baseline conditions do alter, this can be taken into account as mitigation measures are refined, agreed and implemented.

## 1.2 PROPOSED ASSESSMENT METHOD

- 1.2.1 The following sections provide a detailed description of the proposed assessment methodology. This will build on the work undertaken to date and consultation feedback.
- 1.2.2 Historic England's GPA3<sup>3</sup> recommends the following broad approach to assessment:
- Step 1: identify which heritage assets and their settings are affected;

- Step 2: assess whether, how and to what degree these settings make a contribution to the significance of the heritage asset(s);
- Step 3: assess the effects of the proposed development, whether beneficial or harmful, on that significance;
- Step 4: explore the way to maximise enhancement and avoid or minimise harm; and
- Step 5: make and document the decision and monitor outcomes.

### Desk Top Collection of Baseline Data

- 1.2.3 In order to identify heritage assets that may be affected by the proposed development, data will be collected from a variety of sources with regard to the guidance in the Chartered Institute for Archaeologists (CIfA) Standard and guidance for Historic Environment desk-based assessment<sup>8</sup>, and Historic England's Good Practice Planning Advice Note GPA3, The Setting of Heritage Assets<sup>3</sup>.
- 1.2.4 Primary data will be collected for the study areas from those sources which have been identified as holding data within the study area, as outlined in Table 9.1.2.

Table 9.1.2 Potential Sources of Historic Environment Data			
Asset Type	Source	Data type	Data in 5km Study Area
Designated	Historic England (National Heritage List for England)	List of Buildings of Special Architectural or Historic Interest – ArcGIS shapefiles and full descriptions	Y
		Register of Historic Battlefields	N
		Register of Parks and Gardens of Special Historic Interest in England	Y
		Schedule of Ancient Monuments of England – ArcGIS shapefiles and full descriptions	Y
		World Heritage Sites	N
	Shropshire Council	Local Plans – Conservation Area designation plans and Conservation Area Appraisals and Management Plans	Y
Non-Designated	British Museum	Portable Antiquities Database	Y
	Council for British Archaeology	Defence of Britain Database	Y
	Countryside Agency	Heritage Coasts	N
	English Nature	Ancient Woodland	Y

Table 9.1.2

### Potential Sources of Historic Environment Data

Asset Type	Source	Data type	Data in 5km Study Area
	Historic England	National Mapping Programme (NMP)	Y
		National Monuments Register (NMR) Events database of archaeological works	Y
		NMR Aerial Photographs: oblique and vertical	Y
		NMR Monarch database of registered archaeological sites	Y
	Shropshire Council	Cartographic Sources, including Historic Ordnance Survey editions and Pre-Ordnance Survey maps, including tithe and or estate maps	Y
		Grey literature reports of relevant previous archaeological investigations	Y
		Historic Environment Record (HER): ArcGIS shapefiles and long descriptions of archaeological sites and events	Y
		Historic Farmsteads Characterisation Project data	Y
		Historic Landscape Characterisation (HLC) data	Y
		Place Plans	Y
	SP Manweb	Project-specific Lidar data	Y

#### 1.2.5 Secondary data sources will include:

- Background information on the general development of the historic environment;
- Historic England Archive, including photographs and records;
- Regional Research Frameworks; and
- Reports on recent archaeological investigations within the study area that are not yet included in the HER (where available).

#### Field Reconnaissance and Condition Survey

1.2.6 A reconnaissance and condition survey will take place along the proposed route and also of any land crossed by access tracks or used as a construction area. The fieldwork will seek to a) corroborate known assets, b) identify previously unrecorded archaeology, c) determine condition, and d) determine setting.

1.2.7 Further archaeological investigations will be carried out, as required, to inform the baseline assessment. The location, nature and scope of these investigations will be determined as part of the findings of the desk-based assessment and field surveys, and through discussion with the consultees.

1.2.8 Invasive archaeological investigations are not currently planned, as part of this assessment.

### Spatial Scope of the Assessment

1.2.9 The historic environment assessment will focus on those areas which are likely to experience significant effects, as per the requirements of the EIA Regulations (Schedule 4 Part 1 Para 20)<sup>10</sup>. The parameters which matter to the spatial scope of the historic environment assessment are the asset type and asset significance. Table 9.1.3 identifies the study areas which will be applied to each type of heritage asset by asset significance. These study areas appear on Figure 9.1.

Table 9.1.3 – Study Area for each type of Heritage Asset to either side of the Overhead Line (O/H) Draft Order Limits (DOL) and Proposed Project Boundary (PPB)			
Asset Type	Assets of Very High and High Significance	Assets of Medium Significance	Assets of Low Significance
Archaeology	Min. 2km and up to 5 km to either side of O/H DOL	2km from O/H DOL	0.5km from PPB
Built Heritage	Min. 2km and up to 5 km to either side of O/H DOL	2km from O/H DOL	1km from PPB
Historic Landscape	Min. 2km and up to 5 km to either side of O/H DOL	2km from O/H DOL	1km from PPB

1.2.10 A distance of 2km from the overhead line DOL for medium and higher value assets has been selected primarily for the purpose of establishing the visual impact of the proposed development on the setting of heritage assets that are unlikely otherwise to be impacted directly by the proposed development.

1.2.11 A distance of 2km will be applied because this is regarded as the maximum point at which it would potentially give rise to significant visual effects on medium and higher value assets. Very high and high value assets, located beyond 2km, up to a maximum distance of 5km, will also be considered in the assessment if effects are considered likely. It has not been possible to scope out assets in the 5km study area to date due to the ineffectiveness of ZTV in this instance, therefore reliance will be placed on field survey.

### Approach

1.2.12 There is currently no methodology consistently adopted by the Historic Environment profession for assessing impacts on heritage assets as part of an environmental impact assessment (EIA). The only EIA guidance available for assessing impacts to heritage assets was produced by the Highways Agency, and is presented in the revised Design Manual for Roads and Bridges (DMRB), Volume 11 Section 3 Part 2 HA208/07.

1.2.13 Whilst this guidance has been endorsed by Historic England for use on road schemes, it provides a suitable framework that is equally applicable to other linear projects, including high voltage electricity connections, in that it promotes a method of approach to assessment that is consistent with EIA best practice and that advocated by NPS EN-1. For instance, the guidance has been used for many years on other SP Energy Network projects, most recently the North Wales 132kV Connection Project.

1.2.14 In the absence, therefore, of any industry-accepted methodology for electricity infrastructure, the Historic Environment impact assessment for the proposed development will be carried out

<sup>10</sup> The Planning Inspectorate (PINS) (2009), Infrastructure Planning (Environmental Impact Assessment) Regulations 2009 (as amended).

broadly in accordance with the methodology laid out in DMRB. In places, the proposed assessment methodology will diverge from DMRB, as not all elements of DMRB will be applicable to the proposed development. Where a departure from the approach set out in the DMRB is proposed this will be explained within the assessment text.

- 1.2.15 The DMRB considers all components of the historic environment and provides a staged approach for determining the significance of effects of the Project on the historic environment by a) establishing the historic environment baseline to determine the heritage significance of assets that may be affected, including any contribution made by setting to that significance, and b) assessing the magnitude of effect of the Project on that heritage significance.

#### Determining Significance of Effect

- 1.2.16 Government planning guidance advises that the significance of heritage assets may be affected by direct physical change or by change in their setting. Being able to properly assess the nature, extent and significance of a heritage asset, and the contribution of its setting, is very important to understanding the potential impact and acceptability of development proposals.
- 1.2.17 The EIA Regulations require that the significance of the overall effect of a development, taking into consideration the significance of a receptor and the degree or magnitude of benefit or damage, is defined in the ES.
- 1.2.18 The likely significance of effect arising from the proposed development on each of the heritage assets identified during the baseline assessment is a function of the significance of the asset and the magnitude of change likely to arise from it (i.e. the effect on its significance).
- 1.2.19 These three sub-topics, significance of heritage assets, magnitude of effect and significance of effect, will be determined against criteria laid out in a series of tables and matrices (adapted from those provided by the DMRB). These three sub-topics are described in turn below and presented in Tables 9.1.4 to 9.1.6.

#### Significance of Heritage Assets (Importance)

- 1.2.20 The concept of heritage “significance” has effectively replaced “importance” or “sensitivity”, when discussing archaeological or built heritage assets, despite the term not appearing in any of the primary legislation relating to scheduled monuments, listed buildings or conservation areas.
- 1.2.21 Table 9.1.4, which is adapted from DMRB, sets out the criteria for assessing the significance (or importance) of heritage assets that will be applied in the assessment.

Table 9.1.4 – Criteria for Assessing the Significance (Importance) of Heritage Assets	
Significance of Heritage Asset	Example
<b>Very High</b>	<ul style="list-style-type: none"> <li>World Heritage Sites (including nominated sites);</li> <li>Assets of acknowledged international significance;</li> <li>Assets that can contribute significantly to acknowledged international research objectives;</li> <li>Other buildings of recognised international significance;</li> <li>Historic landscapes of international value, whether designated or not; and</li> <li>Extremely well preserved historic landscapes with exceptional coherence, time-depth, or other critical factor(s).</li> </ul>

**Table 9.1.4 – Criteria for Assessing the Significance (Importance) of Heritage Assets**

Significance of Heritage Asset	Example
<b>High</b>	<ul style="list-style-type: none"> <li>• Scheduled monuments (including proposed sites)</li> <li>• Undesignated assets of Schedulable quality and significance;</li> <li>• Assets that can contribute significantly to acknowledged national research objectives;</li> <li>• Grade I, II and II* listed buildings;</li> <li>• Grade I, II and II* Registered Parks and Gardens;</li> <li>• Other listed buildings that can be shown to have exceptional qualities in their fabric or historical associations not adequately reflected in the listing grade;</li> <li>• Conservation Areas containing very important buildings;</li> <li>• Undesignated structures of clear national significance;</li> <li>• Undesignated historic landscapes of outstanding interest;</li> <li>• Undesignated historic landscapes of high quality and significance, and of demonstrable national value;</li> <li>• Well-preserved historic landscapes, exhibiting considerable coherence, time-depth or other critical factor(s).</li> </ul>
<b>Medium</b>	<ul style="list-style-type: none"> <li>• Designated or undesignated assets that contribute to regional research objectives;</li> <li>• Historic (unlisted) buildings that can be shown to have exceptional qualities in their fabric or historical associations;</li> <li>• Conservation Areas containing buildings that contribute significantly to its historic character Historic townscape or built up areas with important historic integrity in their buildings, or built settings (e.g. including street furniture and other structures)</li> <li>• Undesignated historic landscapes that would justify special historic landscape designation, landscapes of regional value; and</li> <li>• Averagely well-preserved historic landscapes with reasonable coherence, time-depth or other critical factor(s).</li> </ul>
<b>Low</b>	<ul style="list-style-type: none"> <li>• Designated and undesignated assets of local significance;</li> <li>• Assets compromised by poor preservation and/ or poor survival of contextual associations;</li> <li>• Assets of limited value, but with potential to contribute to local research objectives;</li> <li>• ‘Locally listed’ buildings;</li> <li>• Historic (unlisted) buildings of modest quality in their fabric or historical association;</li> <li>• Historic townscape or built up areas of limited historic integrity in their buildings or built settings (e.g. including street furniture and other structures);</li> <li>• Robust undesignated historic landscapes;</li> <li>• Historic landscapes with significance to local interest groups; and</li> <li>• Historic landscapes whose value is limited by poor preservation and/ or poor survival of contextual associations.</li> </ul>

**Table 9.1.4 – Criteria for Assessing the Significance (Importance) of Heritage Assets**

Significance of Heritage Asset	Example
<b>Negligible</b>	<ul style="list-style-type: none"> <li>Assets with very little or no surviving archaeological interest;</li> <li>Buildings of no architectural or historical note; buildings of intrusive character; and</li> <li>Landscapes with little or no significant historical interest.</li> </ul>
<b>Unknown</b>	<ul style="list-style-type: none"> <li>Buildings with some hidden (i.e. inaccessible) potential for historic significance.</li> </ul>

1.2.22 Scheduled Monuments are considered of national importance and are therefore graded of high significance.

1.2.23 Listed buildings and registered parks and gardens are each assigned to one of three levels, which in descending order of interest are Grade I, Grade II\* and Grade II. All listed buildings and registered parks and gardens are considered of national importance. For the purposes of the EIA assessment, they will all be considered of high significance, but it does not follow that their significance is equal. Professional judgement will be used when considering the precise significance of assets on a case-by-case basis.

1.2.24 Conservation areas vary considerably in their make-up, with some containing more important buildings than others. Therefore, depending on the particular circumstances, individual conservation areas and their constituent parts and settings could be of either medium or high significance. This will be determined by professional judgement.

1.2.25 World Heritage Sites and Registered Battlefields will not be considered further in this assessment as there are none within the 5km study area.

1.2.26 Determination of an asset's significance will consider the ways people value historic places, in accordance with the four categories outlined in The Conservation Principles<sup>6</sup>:

- Evidential value: the potential of a place to yield evidence about past human activity.
- Historical value: the ways in which past people, events and aspects of life can be connected through a place to the present - it tends to be illustrative or associative.
- Aesthetic value: the ways in which people draw sensory and intellectual stimulation from a place.
- Communal value: the meanings of a place for the people who relate to it, or for whom it figures in their collective experience or memory

1.2.27 These values will be assessed in the range Low, Medium and High for each asset. These scores will contribute to the judgement as to whether an asset's significance is towards the upper or lower end of its significance score, as shown in Table 9.1.4. For example, a scheduled monument with high value scores is likely to be judged as having significance at the upper end of high, while one with low value scores is likely to be judged as having significance at the lower end of high.

1.2.28 In addition to determining the significance of heritage assets, a qualitative assessment will also be made of an asset's sensitivity, i.e. its capacity to absorb change.

### Magnitude of Effect

1.2.29 The assessment of the magnitude of effect will consider the extent to which a heritage asset may be changed or affected by the proposed development by reason of its location or design.

1.2.30 Table 9.1.5, which is adapted from DMRB, sets out the thresholds and criteria for assessing the magnitude of impacts to heritage assets that will be applied in this assessment.

**Table 9.1.5 – Criteria for Assessing Magnitude of Impact to Heritage Assets**

Magnitude of Impact	Example
<b>Major</b>	<ul style="list-style-type: none"> <li>• Change to most or all key archaeological materials, such that the resource is totally altered;</li> <li>• Change to key historic building elements, such that the resource is totally altered or lost;</li> <li>• Comprehensive changes to the setting of historic buildings; and</li> <li>• Change to most or all key historic landscape elements, parcels or components; extreme visual effects; gross change of noise or change to sound quality; fundamental changes to use or access; resulting in total change to historic landscape character unit.</li> </ul>
<b>Moderate</b>	<ul style="list-style-type: none"> <li>• Changes to many key archaeological materials, such that the resource is clearly modified;</li> <li>• Considerable changes to setting that affect the character and significance of the asset;</li> <li>• Change to many key historic building elements, such that the resource is significantly modified;</li> <li>• Changes to the setting of an historic building, such that it is significantly modified and its significance is affected; and</li> <li>• Changes to many key historic landscape elements, parcels or components, visual change to many key aspects of the historic landscape, noticeable differences in noise or sound quality, considerable changes to use or access; resulting in moderate changes to historic landscape character.</li> </ul>
<b>Minor</b>	<ul style="list-style-type: none"> <li>• Changes to key archaeological materials, such that the asset is slightly altered;</li> <li>• Slight change to setting that affects its significance;</li> <li>• Change to key historic building elements, such that the asset is slightly different;</li> <li>• Change to setting of an historic building, such that it is noticeably changed and its significance is affected; and</li> <li>• Changes to few key historic landscape elements, parcels or components, slight visual changes to few key aspects of historic landscape, limited changes to noise levels or sound quality; slight changes to use or access: resulting in limited changes to historic landscape character.</li> </ul>
<b>Low</b>	<ul style="list-style-type: none"> <li>• Very minor changes to archaeological materials, or setting;</li> <li>• Slight changes to historic building elements or setting that hardly affect it; and</li> <li>• Very minor changes to key historic landscape elements, parcels or components, virtually unchanged visual effects, very slight changes in noise levels or sound quality; very slight changes to use or access; resulting in a very small change to historic landscape character.</li> </ul>
<b>No Change</b>	<ul style="list-style-type: none"> <li>• No change to archaeological assets;</li> <li>• No change to fabric or setting of historic buildings; and</li> <li>• No change to elements, parcels or components of the historic landscape; no visual or audible changes; no changes arising from in amenity or community factors.</li> </ul>

1.2.31 In some cases, impacts will be allocated to the upper or lower end of a particular magnitude of impact category by the historic environment assessor(s) using their professional judgement.

1.2.32 The following parameters will be considered in determining the magnitude of impact:

- Impacts arising at the construction or operation stages;
- Beneficial, adverse or neutral impacts;
- Direct and indirect impacts;
- Extent/ scale of impacts;
- Duration, timing, frequency and reversibility of impacts, and
- Cumulative effects.

1.2.33 Temporary impacts may be short, medium or long term, are always reversible and will mostly occur in the construction phase of the proposed development.

1.2.34 Irreversible impacts are described as permanent, and occur in the construction, operational and decommissioning phases.

1.2.35 Direct impacts are those that arise as straightforward consequences of a project. This could include physical change to an asset or its setting.

1.2.36 Indirect impacts are impacts that arise via a complex route, where the connection between the project and the impact is complicated, unpredictable or remote. Indirect impacts are not necessarily less damaging than direct impacts.

1.2.37 Cumulative effects occur when incremental effects arise in combination with other aspects of the proposed development or cumulatively with other relevant developments.

1.2.38 Relationships between assets will be considered in the assessment where such relationships contribute to the significance of a heritage asset.

#### Significance of Effect

1.2.39 The significance of potential effects or changes to heritage assets is determined by the 'heritage value' of the asset/ asset group and the magnitude of change that might affect the significance of that asset or group.

1.2.40 Table 9.1.6 illustrates how information on the significance of the heritage asset and the magnitude of impact will be combined to arrive at an assessment of the level of effect arising from the proposed development.

1.2.41 The matrix in Table 9.1.6 is not intended to 'mechanise' judgement of the significance of effect but to act as a check to ensure that judgements regarding value, magnitude of impact and significance of effect are reasonable and balanced.

1.2.42 In order to allow for professional judgement, in some cases, the matrix allows a choice of level of effect to be made for the same combination of value and magnitude. In these cases, the individual attributes of a specific asset, along with any relevant site-specific factors and consideration of other influencing elements, will be taken into account in considering the most appropriate significance of effect to use. Allocation of a heritage asset to a particular Level of Effect will ultimately be based on professional judgement and the guidance set out in the Historic Environment Good Practice Planning Advice Note 2.

1.2.43 A level of effect of moderate significance or above is considered a 'significant' effect. All effects that are considered to be significant are highlighted in bold in Table 9.1.6.

Table 9.1.6 – Criteria for Determining the Level of Effects

		Magnitude of Effect				
		MAJOR	MODERATE	MINOR	NEGLIGIBLE	NO CHANGE
Significance of Heritage Asset	VERY HIGH	<b>Very Large</b>	<b>Large/ Very Large</b>	<b>Moderate/ Large</b>	Slight	Neutral
	HIGH	<b>Large/ Very Large</b>	<b>Moderate/ Large</b>	<b>Moderate/ Slight</b>	Slight	Neutral
	MEDIUM	<b>Moderate/ Large</b>	<b>Moderate</b>	Slight	Neutral/ Slight	Neutral
	LOW	Slight/ <b>Moderate</b>	Slight	Neutral/ Slight	Neutral/ Slight	Neutral
	NEGLIGIBLE	Slight	Neutral/ Slight	Neutral/ Slight	Neutral	Neutral

### Methodology for Assessing Setting

- 1.2.44 An assessment will be undertaken in line with Historic England's Good Practice Planning Advice Note 3 to identify those heritage assets where significant effects on settings may arise.
- 1.2.45 The assessment will refine understanding on the extent of setting for all designated assets and important non-designated assets identified during baseline data collection and then establish which are likely to be affected by the proposed development.

### Determining Extent of visibility

- 1.2.46 Computer generated Zone of Theoretical Visibility' (ZTV) maps will not be produced, on account of the fact that it is considered that these would be unreliable, given the pattern of visibility relative to the height of a Trident pole, the local undulating terrain and vegetation cover.
- 1.2.47 Extensive field survey, therefore, will be used to gain understanding of visibility of the proposed development. Access to private land and properties will not be sought. The assessment will therefore be based on judgements made from publicly accessible land. A precautionary approach will be applied, therefore, in determining the likely magnitude of potential effects on heritage assets, particularly those assets which possess height (e.g. buildings with upper floors).
- 1.2.48 This work would be supported by the identification of the locations or 'viewpoints' which assist in the understanding of effects on important heritage assets and their settings. It is important to understand that historic environment viewpoints cannot capture the totality of potential impacts on setting and therefore they are not assessed for impacts in and of themselves. A schedule of historic environment viewpoints is provided in Appendix 7.4.

1.2.49 Settings of heritage assets which are unaffected or negligibly affected would be discounted from subsequent assessment.

**Assessing whether, how and to what degree setting makes a contribution to the significance of an asset**

1.2.50 The assessment will consider whether, how and to what degree setting makes a contribution to the significance of heritage assets. The assessed effects of the proposed development on setting will then be used to determine the effects on the significance of each asset. Detailed consideration of setting will be employed for any assets where setting is a major contributor to their significance. The assessment will consider a combination of physical attributes and the experience of the asset, including the following factors:

- Character, integrity, appearance and the way in which these are appreciated;
- Reasons for designation, and degree to which those reasons contribute to appreciation and significance of the asset;
- Relationships with other heritage assets, group value and shared settings, including a consideration of formal design, intended sight lines and vistas and inter-visibility with other heritage assets and natural features;
- 'Key' (principal/critical) views towards, from, across and within the heritage asset;
- Topography/ landscape situation;
- Asset scale, i.e. prominence/ dominance and character;
- Landscape character, degree of alteration within setting, and existing impacts; and
- Capacity to absorb change to setting (i.e. sensitivity).

1.2.51 A key consideration in determining the contribution that setting makes to the significance of a heritage asset is distance from the asset. Significance of setting weakens with distance and is strongest where there is a good visual relationship with the designated asset.

1.2.52 The contribution that the immediate and wider setting makes to the significance of each asset will be assessed in the range Low, Medium and High for each asset. These scores will contribute to the judgement as to the sensitivity to change of each asset's setting and will therefore contribute to the determination of impact ratings. For example, a particular level of change to setting is likely to be deemed as having greater impact on an asset if its setting has been scored as having a high contribution to significance, than the same level of change to an asset's setting if its contribution to significance is scored low. Change to a setting may result in adverse, beneficial or neutral impacts to the significance of an asset.

1.2.53 Following the detailed consideration of setting, the assessment will employ the impact assessment methodology outlined above to assess potential effects of the proposed development on the significance of heritage assets, taking account of the predicted relative scale of the proposed development. Assets that would be subject to neutral or negligible effects would be discounted from further assessment.

**Avoidance of Double Counting of Impacts**

1.2.54 Impacts to the setting of particular heritage assets may begin in the construction phase but may extend into the operational phase. In order to avoid double counting of impacts, all impacts to setting of heritage assets will be assessed in the operation phase unless the impact would occur solely at the construction phase.

### Additional Archaeological Investigation

- 1.2.55 The baseline data presented in this document comprises the known historic environment resource based on data collected to date. There is also the potential for currently unknown heritage assets, including built heritage and archaeology, to be present within the study area. In order to identify these remains and assess any potential impacts from the proposed development, further archaeological investigations are likely to be carried out in particular areas. These could include assessment techniques such as field reconnaissance, geophysical survey or intrusive investigations such as trial trench evaluation and/or test pitting. Any areas of the proposed development that will be subject to additional archaeological investigation will be determined through further assessment of existing baseline data and through consultation with stakeholders. The methodology for these investigations will follow best practice and guidance notes issued by the ClfA and Historic England.

## 1.3 MITIGATION

### Mitigation Hierarchy

- 1.3.1 Mitigation follows the following hierarchy:

- 1) Design principles;
- 2) Environmental measures;
- 3) Mitigation; and
- 4) Enhancement.

- 1.3.2 Table 9.1.7 describes the design principles and environmental measures that are incorporated into the Proposed Development with respect to the historic environment.

Table 9.1.7 – Rationale for incorporation of design principles and environmental measures		
1) DESIGN PRINCIPLES		
Receptor or Receptor Group	Potential Effect	Incorporated Measures
Designated Heritage Assets	Direct physical impacts from project infrastructure resulting in loss of fabric and significance to high/very high value assets	Project infrastructure has been sited to avoid designated heritage assets wherever possible.
	Change to setting due to introduction of pylons and above ground infrastructure potentially resulting in harm to heritage significance.	Infrastructure has been positioned to avoid or minimise settings impacts as far as reasonably possible, e.g. pole X has been moved to lessen potential impacts on X.

Non-designated Assets	Heritage Assets Direct physical impacts from project infrastructure could result in loss of archaeological interest.	The project has been designed to avoid or minimise physical impacts to areas of known heritage assets and of significant archaeological potential as far as reasonably possible.
2) ENVIRONMENTAL MEASURES		
Designated Heritage Assets	Change to setting due to introduction of project infrastructure potentially resulting in harm to heritage significance.	During design development, the micro-siting of infrastructure has been (and will continue to be) informed by the historic environment baseline to avoid or minimise historic environment impacts as far as reasonably possible.
Non-designated Assets	Direct physical impacts from project infrastructure could result in loss of archaeological interest.	During design development, the micro-siting of infrastructure has been (and will continue to be) informed by the historic environment baseline to avoid or minimise historic environment impacts as far as reasonably possible.
3) MITIGATION		
Designated Heritage Assets	Change to setting due to introduction of project infrastructure potentially resulting in harm to heritage significance.	On-site planting to reduce or soften impacts to setting of designated assets, is in the control of the project to implement and manage. On-site planting, proportionate to the significance of a particular designated heritage asset, will therefore be considered where it is practical and reduces the effect from significant to non-significant.
Non-designated Assets	Direct physical impacts from project infrastructure could result in loss of archaeological interest.	Archaeological investigation and recording techniques, as described above (Additional Archaeological Investigation) will be employed to ensure that known and any as yet unknown heritage assets with archaeological interest identified as being adversely affected by construction activity would be appropriately recorded.
4) ENHANCEMENT		

Designated Heritage Assets	Enhancement of the significance of an asset due to changes in its setting resulting from the removal of existing overhead lines from the asset's setting in locations where the project infrastructure will not fall within the asset's setting.	No such beneficial effects are anticipated for this project.
----------------------------	--	--

### Embedded Mitigation

- 1.3.3 An integral part of the iterative design and assessment process undertaken to date has been the consideration of mitigation through sensitive routeing and design in accordance with the Holford Rules and in response to consultation. The aim has been to ensure that the proposed development avoids heritage assets and sensitive areas and achieves the optimum fit as part of an environmentally integrated design.
- 1.3.4 Throughout the remainder of the design process, the findings of the desk-based assessment, consultations and further survey work will be used to refine the design and wherever possible will seek to avoid impacts to heritage assets and their settings through the design of:
- Individual pole positions and their associated infrastructure, including their materials and finish;
  - Temporary and permanent access arrangements; and
  - Temporary construction areas (in relation to historic environment assets).

### Good Practice Mitigation

- 1.3.5 Good practice mitigation would encompass the standard range of archaeological investigation and recording techniques to ensure that where archaeology is identified as being at risk of being impacted by construction activity it is appropriately mitigated.
- 1.3.6 Good practice mitigation measures will be incorporated into the Construction Environment Management Plan (CEMP) and will be subject to Written Schemes of Investigation. These will be produced and agreed with the Historic Environment Advisors to Shropshire Council and, if appropriate, Historic England, and will follow appropriate guidance as issued by Historic England and ClfA (see paragraph 10.25).
- 1.3.7 If necessary, good practice mitigation will also consider appropriate screen planting to reduce or remove impacts to the settings of assets.

### Approach to Inter-Discipline Relationship Effects

- 1.3.8 The historic environment assessment has considered and identified the potential inter-relationship of effects that could occur during the construction, operational and decommissioning phases of the Project. This includes the inter-relationship effects between different aspects of the environment that could lead to an additional or alternative assessment of the significance of a residual effect.
- 1.3.9 The principal potentially significant inter-relationship effects, or cross reference to survey results of mutual interest, that relate to the historic environment comprise the following:
- Construction/Operational Noise and Vibration, and Transport – indirect effects resulting from construction activities need to be determined in respect of heritage assets that could be

---

sensitive to those effects resulting from increased traffic movement, noise, dust or vibration;

- Geology and Soils – Site investigation works can provide useful information regarding ground conditions that assists in predicting the likely presence or absence of as yet unknown heritage assets with archaeological interest, and should also be checked against the historic environment baseline to avoid any effects on designated heritage assets;
- Landscape and Visual Impact – landscape planting proposals can adversely affect buried archaeology. The assessment for EIA will ensure that areas of planting that form part of the application are assessed against historic environment baseline data. Also, the visualisations prepared to assist the LVIA can be useful in assessing effects on the settings of heritage assets. If planting has been proposed to soften landscape and visual impacts it can, in some cases, reduce predicted effects in relation to the settings of heritage assets; and
- Ecology – Intrusive archaeological field surveys could result in additional potential effects on biodiversity receptors. All intrusive archaeological works will be reviewed by an ecologist during the preparation of EIA, to ensure that no adverse effects would occur.

1.3.10 The inter-relationship effects that are relevant to the historic environment assessment will be assessed and reported in the ES.

#### 1.4 CUMULATIVE HISTORIC ENVIRONMENT EFFECTS

1.4.1 The cumulative assessment will identify whether potential historic environment changes arising from the Proposed Development in conjunction with or combined with other developments would result in significant additional effects. Relevant developments to be considered within the cumulative assessment will be agreed in consultation with Shropshire Council.

##### Approach

1.4.2 The assessment of cumulative historic environment effects will follow a similar methodology to that described above for the main historic environment assessment, in that the degree of effect is determined by combining an evaluation of the significance of the heritage asset and the magnitude of change. The resulting effect will be described in the ES as major, moderate, minor or negligible. The cumulative assessment will consider the magnitude of change which would potentially arise from multiple developments.

1.4.3 Cumulative effects will generally consider designated assets and significant non-designated assets.

##### Defining the Study Area for Cumulative Assessment

1.4.4 The study area for the cumulative assessment will take account of other proposed developments, which are either consented or under construction. The zones of influence for each development within the cumulative assessment will be defined once the nature and location of the other developments is known. Where sufficient information is not available from the other developments then reasonable assumptions and judgments will be made.

1.4.5 Cumulative effects will normally be considered over a distance of 5km from the proposed development, although this will be reviewed on a case-by-case basis for different types of heritage assets.

##### Baseline for the Assessment of Cumulative Effects

1.4.6 The baseline information for the Proposed Development will include the baseline for the main historic environment assessment, amended if necessary to allow for the consideration of the other developments.

---

### Predicting Cumulative Historic Environment Effects

- 1.4.7 When considering cumulative effects, the assessment will (so far as available information allows) consider factors such as magnitude, duration, reversibility and geographic scale in the same way as the main assessment of the Proposed Development.

### Assessment of Cumulative Historic Environment Effects

- 1.4.8 Criteria and thresholds for historic environment value or sensitivity are set out earlier in this chapter.
- 1.4.9 Where required, mitigation will be considered for any identified cumulative effects and residual effects will then be assessed with mitigation in place. As noted previously, however, most mitigation will be undertaken as part of the iterative design and routeing of the Proposed Development.

# APPENDIX 9.2

## HISTORIC ENVIRONMENT BASELINE AND ASSESSMENT

## APPENDIX 9.2:

### HISTORIC ENVIRONMENT BASELINE AND ASSESSMENT

#### 1.1 INTRODUCTION

- 1.1.1 This section describes the historic environment baseline and assesses the effects on the historic environment of the Proposed Development. The historic environment baseline forms the basis for the identification and description of the historic environment changes that may result from the Proposed Development.
- 1.1.2 The starting point is gathering data, using trusted sources to collate adequate, up-to-date and relevant information on known and potential assets, and undertaking proportionate research where the evidence base is weak. Designated assets and some non-designated assets are identified via GIS data sets. Further non-designated receptors and potential receptors are identified via additional desk-based research, responses from consultation feedback and through site survey.
- 1.1.3 What matters for heritage assets is establishing an understanding of their value to society (i.e. their significance) and the contribution of setting to significance of those assets which are affected by the proposed development.
- 1.1.4 Potential visual effects are identified through a review of the baseline studies, and also through site survey to a) verify key views, b) establish the extent of potential inter-visibility of heritage assets to one another and the proposed development, and c) develop an understanding of the experience of assets and their settings and potential change which may result from different elements of the Proposed Development. This work would be supported by the identification of the locations or 'viewpoints' which assist in the understanding of effects on important heritage assets and their settings. It is important to understand that historic environment viewpoints cannot capture the totality of potential impacts on setting and therefore they are not assessed for impacts in and of themselves. A schedule of historic environment viewpoints is provided in Appendix 7.4.
- 1.1.5 The level of assessment will be proportionate to the significance of the heritage assets affected and the impact on the significance of those assets.
- 1.1.6 As the proposed development progresses, further data will be collected and the project historic environment baseline will be expanded (see below).

#### 1.2 BASELINE ENVIRONMENT

- 1.2.1 The following sections describe the existing historic environment baseline.
- 1.2.2 The proposed development originates east of Oswestry, running underground for a short distance alongside the A5. The proposed 132kV overhead line heads for over 21km, in a broadly west to east direction across the settled farmlands, estate farmland, river floodplains and lowland moors of north Shropshire.

##### Summary Quantification of Heritage Assets

- 1.2.3 Table 9.2.1 below presents a summary quantification of heritage assets within the study areas, and more specifically it provides a breakdown of the total counts of each asset type. The purpose of this summary is to convey the number and distribution (i.e. the broad density) of each asset type within and across the study areas.
- 1.2.4 The total count of each type of asset is greater than the actual number on account of the fact that the existing baseline data has not yet been fully rationalised and cross-referenced, so there may be some duplicates.

1.2.5 More information on these assets is presented in the heritage asset tables in Appendix 9.3 and on Figure 9.1 of this PEIR.

Table 9.2.1 – Summary Quantification of Heritage Assets by Study Area					
Asset Type	Proposed Project Boundary	1km	2km	5km	Totals
Conservation Area		3	1	1	5
Listed Building (Grade I)		2	1	3	6
Listed Building (Grade II*)		7	3	19	29
Listed Building (Grade II)		143	86	366	595
Registered Parks and Garden				2	2
Scheduled Ancient Monument		5	6	17	28
<b>Total of Designated Assets</b>		<b>160</b>	<b>97</b>	<b>408</b>	<b>665</b>
HER low significance	12	314		n/a	326
HER medium significance	1	33	29	n/a	63
HER high significance		2		n/a	2
Non-designated park		1	1	n/a	2
<b>Totals of Non-Designated Assets</b>	<b>13</b>	<b>350</b>	<b>30</b>	<b>n/a</b>	<b>393</b>
<b>GRAND TOTALS</b>	<b>13</b>	<b>510</b>	<b>127</b>	<b>408</b>	<b>1058</b>

### Designated Assets

#### Scheduled Monuments

- 1.2.6 One of the most prominent heritage assets, the scheduled remains of Old Oswestry Iron Age Hillfort (SM 1014899) and several sections of Wat's Dyke (SM 1014899, SM 1020564, SM 1020619), a post-Roman linear boundary, occupy the uplands at the west end of the Study Area.
- 1.2.7 The scheduled remains of Oswestry Castle, a medieval motte and town wall (SM 1019300), occupies elevated land in Oswestry town, while a further three scheduled medieval motte & bailey castles occupy low hills to the north-east (Whittington Castle, SM 1019450) and south (West Felton Castle, SM 1019296 and Hisland Castle, SM 1013497). Collectively, these four castles

form part of an extensive medieval defensive network. Their settings are large and are crossed by the proposed development. Whittington Castle is located closest, at a distance of just over 1km from the proposed development. The castle's setting on its south side is compromised by modern development including the railway. The castle's historic sight-line with Oswestry Castle has long been lost to modern development around the town. One further medieval scheduled monument, located towards the west end of the Study Area, is Bromwich Park (SM 1017006), a moated site and formal garden.

- 1.2.8 The rolling hills of the central eastern end of the Study Area are occupied by four scheduled monuments. Stanwardine medieval moated site and associated fishpond (SM 1017240) is the closest at less than 450m to the south of the proposed development. A second medieval moated site (SM 1016828) and a nearby prehistoric bowl barrow (SM 1016826) are located in Petton Park, approximately 1.6km and 2km respectively to the south. The fourth scheduled monument is a medieval motte castle on the north bank of Crose Mere (SM 1020289) almost 2.5km to the north.
- 1.2.9 A scheduled sundial in the parish churchyard at Loppington (SM 1003020), which is also a Grade II listed building (LB 1390988), is located almost 1km to the north-west of the proposed development towards the eastern end of the proposed development. Northwood Hall, a medieval double moated site (SM 1019606), is located well over 2km to the north of the proposed development.
- 1.2.10 The most prominent scheduled monument at the very east end of the Study Area is Wem Castle, a medieval motte castle located immediately south-west of St Peter and St Paul's Church in the town of Wem (SM 1020287) and over 800m east of the proposed development.

#### Conservation Areas and Listed Buildings

- 1.2.11 There are three conservation areas at the western end of the Study Area. The largest is Pantglass and Brogyntyn, which includes the registered park and garden of Brogyntyn. To the immediate south-east is Oswestry Town Centre conservation area, which includes the scheduled remains of Oswestry Castle (SM 1019300) and a very large number of listed buildings, mostly dating to the post-medieval and early modern periods. Four of these are Grade I/ II\* listed.
- 1.2.12 To the east of Oswestry and lying on the north side of the proposed development, is Whittington conservation area, which includes the scheduled remains of Whittington Castle, the Grade I listed Whittington Hall (LB 1178307) and a small concentration of Grade II listed buildings.
- 1.2.13 Halston Hall (LB 1054216) and Chapel (LB 1367397), which are both Grade I listed, are located approximately 2km and 1.5km, respectively, north of the proposed development. Old Hall (LB 1307787), which is Grade II\*, is located further north towards the northern edge of the study area.
- 1.2.14 At Woodhouse, the proposed development skirts to the north of a small cluster of listed buildings, including the house and stable-block (LB 1054231, LB 1367378), which are Grade II\* listed.
- 1.2.15 The Church of St Michael at West Felton (LB 1367365) and Pradoc Hall (LB 1054637), both Grade II\* listed buildings, are located towards the southern edge of the study area.
- 1.2.16 Grade II listed buildings towards the west end of the Study Area are mostly concentrated to the west of the proposed development in Oswestry conservation area and in settlements to the south and south east, including Maesbury, Middleton and West Felton/ Twyford. Other concentrations are to be found in Whittington conservation area or dispersed along the Ellesmere Canal on the north side of the proposed development.
- 1.2.17 At Hordley, there is a Grade I listed church of St Mary's church (LB 1055883) approximately 1.5km north-west of the proposed development. Two Grade II\* listed buildings, Lee Old Hall (LB 1055893) and The Lythe (LB 1055920), are located towards the northern edge of the study area.

- 1.2.18 The density of Grade II listed buildings in this central section of the study area is notably low and there is only one within 1km of the proposed development, this being Shade Oak Farmhouse. The remaining Grade II listed buildings are almost exclusively located to the north in settlements such as and Hordley, Lee, and along the Ellesmere Canal.
- 1.2.19 The most notable listed building towards the eastern end of the Study Area is the Grade II\* Stanwardine Hall (LB 1176127), which is located immediately east of the scheduled moat referenced above and approximately 370m south of the proposed development.
- 1.2.20 Wycherley Hall (LB 1055965), a further Grade II\* listed building, is located close to Stanwardine but at distance approaching 1km to the south of the proposed development. Petton Church (LB 1055887) located within Petton Park is also Grade II\* listed. A further Grade II\* listed building, the Church of St John the Evangelist, is located at Colemere (LB 1055926) towards the northern edge of the study area.
- 1.2.21 Malt Kiln Farmhouse, is Grade II listed, and located less than 150m to the south-east at the proposed development. To the south are three further Grade II listed buildings, these being Burlton Grange Farmhouse (LB 1212453)/ Mill Farmhouse (LB 212502) and Wackley Farmhouse (LB 1366566) at distances of approximately 850m and 1.1km respectively.
- 1.2.22 Small concentrations of Grade II listed buildings are present towards the outer limits of the study area in the towns of Cockshutt and Colemere and along the Ellesmere Canal to the north of the proposed development, while others are dispersed along distant roads to the south.
- 1.2.23 Woodgate (LB 1289526) and its associated stables (LB 1366485) are located approximately 650m to the north of the proposed development.
- 1.2.24 The Shayes Farmhouse (LB 1056054) is a Grade II listed building located to the north of Noneley, and less than 200m east and south of the proposed development. Other Grade II listed buildings close to the proposed development include: Noneley Hall Farmhouse (LB 1212917) and Grafton Farmhouse (LB 1366490) in the hamlet of Noneley, Ruewood Farmhouse in the parish of Loppington (LB 1289496) and Ruewood Farmhouse in the parish of Wem (LB 1236794), all of which are 500-700m to the south of the proposed development
- 1.2.25 There are two conservation areas at the east end of the study area. Loppington Conservation Area, which is approximately 840m to the north-west of the proposed development, contains the smallest concentration of listed buildings, including the Grade I parish church of St Michaels (LB 1056050).
- 1.2.26 Wem, the larger conservation area, is approximately 650m to the east of the proposed development. It includes the scheduled remains of the medieval castle (referenced above) and a large number of listed buildings, mostly dating to the post-medieval and early modern periods, and three of which are Grade II\* listed.
- 1.2.27 The Ditches Hall (LB 1264550), to the north of Wem, is located just over 750m to the north-west of the proposed development. It is notable as being Grade II\* listed and also for having a formal garden arrangement encompassing a Grade II listed sundial (LB 1236569). The Former Lodge, Entrance to Belle (LB 1264545), which is Grade II listed, is located close-by to the east at just over 600m from the proposed development.

#### Registered Parks and Gardens

- 1.2.28 There are two registered parks and gardens within the study area. The large registered park and garden of Brogyntyn (RPG 1001326) is located on elevated land to the north west of Oswestry town, while the smaller Pradoc Park (RPG 1001251) occupies low lying ground towards the southern edge of the study area. Both parks are Grade II.

#### **Non-Designated Assets**

- 1.2.29 There are a large number of non-designated historic landscapes of potential regional significance within the study area which are informed by the Shropshire Historic Landscape Characterisation Project and Shropshire Historic Farmsteads Characterisation Project. In the western half of the study area, these include Woodhouse Park (SHER MSA 18442), the closest

to the proposed development at approximately 230m to the south, Park Hall Park & Garden (SHER MSA 4080), Halston Hall Park (SHER MSA 4075), Kenwick Park (SHER MSA 4036) and Fernhill Hall Park (SHER MSA 07624) to the north, and Hem Deer Park (SHER MSA 1877), Bagley Hall (SHER MSA 16857), Tedsmore Hall (SHER MSA 07638) and Aston Hall Park (SHER MSA 07618) to the south, all of which are at least 1km from the proposed development. Towards the eastern end of the study area are two further non-designated historic landscapes of potential regional significance including Petton Hall Park (SHER MSA 4045) located approximately 560m to the south and Frankton Grange Parkland (SHER MSA 33406) located over 1km to the north.

- 1.2.30 Non-designated buildings are present in very large numbers within the study area. Stanwardine Grange (SHER MSA 30370) is noteworthy as being of potentially regional significance and is located within 250m of the proposed development on its north side. Loppington House (SHER MSA 16860) sits within Loppington House Park (SHER MSA 4038) to the north of Loppington town and is over 1.2km to the north-west of the proposed development.
- 1.2.31 Notable non-designated buildings of local significance within 250m of the proposed development include Rednall Mill Farm (SHER MSA 27051), Lees Farm (SHER MSA 27057), Paradise, Lower Lee (SHER MSA 22938), Dandyford Farm (SHER MSA 24732), Red House Farm (SHER MSA 24776), Reynolds Cottage (SHER MSA 24730), Top House Farm (SHER MSA 24780), Stonehill (SHER MSA 30369), The Wood (SHER MSA 30368), The Moors (SHER MSA 25994), Pearl Farm (SHER MSA 290773), Lower Pool Farm (SHER MSA 25235), The Pools Farm (SHER MSA 29048) and Clays Buildings (SHER MSA 29049).
- 1.2.32 Other notable non-designated assets of potential regional significance in the western half of the study area include a Roman Marching Camp (SHER MSA 0935), located just 550m to the north of the proposed development, and the Montgomery Canal (SHER MSA 651), which is crossed by the proposed development. This canal connects to the Ellesmere Canal (SHER MSA 03414) at Lower Frankton towards the northern edge of the study area. At the eastern end of the study area is Wem Post-medieval Town (SHER MSA 11818), Wem Tenement Plots (SHER MSA 12877/12888) and Wem Civil War Defences (SHER MSA 13505). Wem Street System (SHER MSA 12884) is approximately 250m to the east of the proposed development.

### 1.3 ISSUES IDENTIFIED

#### Construction

- 1.3.1 Direct physical impacts on below ground archaeology during the construction phase are most likely to result from a) mechanical stripping of working areas and access tracks, b) mechanical excavation of foundation pits for poles, and mechanical excavation of cable trenches for the proposed overhead line or the undergrounding of existing infrastructure. The effects of such impacts would be permanent and irreversible.
- 1.3.2 Below-ground activities may also cause indirect below-ground impacts, such as dewatering or desiccation of permanently or seasonally-waterlogged deposits, resulting from changes to groundwater hydrology. Such effects could be either permanent and irreversible or short-term and temporary but are highly unlikely to result from construction of a wood pole overhead line which does not require any foundations.
- 1.3.3 Some of the working practices during construction may cause effects, resulting from visual intrusion on built heritage and historic landscape. Such effects would be short-term and temporary.

#### Operation

- 1.3.4 Effects on built heritage and historic landscape are most likely to occur during the operation phase, resulting from visual intrusion into the landscape from the overhead line and alteration to the visual setting or tranquility of heritage assets. Such effects would be permanent but potentially reversible.

- 1.3.5 Direct physical impacts on heritage assets are unlikely to occur during the operation phase as the overhead line would only require very occasional visits by SP Energy Networks for maintenance or repair.
- 1.3.6 The findings of the assessment undertaken to date and discussions with stakeholders have led to the identification of locations where there are heritage assets requiring very careful consideration in the ongoing iterative detailed design and assessment process. Two assets requiring particular attention are:
- The Shayes Farmhouse (LB 1056054), and
  - Malt Kiln Farmhouse (LB 1056039).

#### Scoping Out of Effects

- 1.3.7 Certain effects resulting from the proposed development are unlikely to impact heritage assets and therefore these activities have been scoped out of the assessment:
- Effects of routine operation and maintenance of overhead lines during the operational phase as this will require a limited number of visits;
  - Effects of pruning/ vegetation clearance at overhead lines during the operational phase; and
  - Effects of changes to underground hydrology which might arise from an overhead line during the construction and operational phases, as the wood poles require no foundations.

### 1.4 PRELIMINARY ASSESSMENT OF IMPACTS AND EFFECTS

- 1.4.1 There are 13 non-designated heritage assets which lie partly or entirely within the footprint of the Proposed Project Boundary, as outlined in Table 9.2.1 above. Of these, 1 asset is of medium significance and 12 assets are of low significance. These assets are listed below:
- HER MSA651: The Montgomery Canal;
  - HER MSA3290: Steel Fabrication Works;
  - HER MSA12992: The Oswestry, Ellesmere & Whitchurch Railway (Cambrian);
  - HER MSA13417: Cropmark circa 300m south-west of Dandyford;
  - HER MSA13971: Cropmarks of a rectangular enclosure circa 400m; north-east of Top House Farm;
  - HER MSA17003: Rednal Mill;
  - HER MSA18439: Woodhouse estate duck decoy;
  - HER MSA18721: Shrewsbury & Chester Railway;
  - HER MSA24780: Top House Farm;
  - HER MSA29083: Coppice Farm;
  - HER MSA30778: Possible cropmark enclosure, south-east of Oswestry;

- 
- HER MSA30842: Burnt mound circa 580m east of Lower Lees, Rednal; and
  - HER MSA31021: Earthwork ridge and furrow west of Wem.

### Impacts during construction

1.4.2 Installation of the proposed poles for the 132kV overhead line will have direct physical impacts on the following heritage assets of low significance:

- HER MSA13417: Cropmark circa 300m south-west of Dandyford;
- HER MSA18439: Woodhouse estate duck decoy;
- HER MSA30778: Possible cropmark enclosure, south-east of Oswestry;
- HER MSA30842: Burnt mound circa 580m east of Lower Lees, Rednal; and
- HER MSA31021: Earthwork ridge and furrow west of Wem.

1.4.3 Two heritage assets, the Shrewsbury & Chester Railway (HER MSA18721) and The Oswestry, Ellesmere & Whitchurch Railway (Cambrian) (HER MSA12992) are over-sailed by the Preferred Line Route and therefore not directly physically impacted.

1.4.4 Mechanical excavation of the proposed cable trench at the west end of the Proposed Development will have direct physical impacts on the following heritage assets of low significance:

- HER MSA30778: Possible cropmark enclosure, south-east of Oswestry.

1.4.5 Mechanical stripping of proposed temporary working areas will have direct physical impacts on the following heritage assets of low significance:

- HER M HER MSA3290: Steel Fabrication Works; and
- SA31021: Earthwork ridge and furrow west of Wem.

1.4.6 Mechanical excavation of, and vehicular movement along proposed access tracks will have direct physical impacts on the following heritage assets of low significance:

- HER MSA30778: Possible cropmark enclosure, south-east of Oswestry;
- HER MSA13971: Cropmarks of a rectangular enclosure circa 400m north-east of Top House Farm; and
- HER MSA3290: Steel Fabrication Works.

1.4.7 The Montgomery Canal (HER MSA651) is over-sailed by the Preferred Line Route and therefore not directly physically impacted.

1.4.8 None of the above impacts are likely to generate significant effects.

### Impacts during operation

1.4.9 There are almost 100 heritage assets of high significance within the 2km study area, as outlined in Table 9.2.1 above. The majority of these assets are located at distances which are too great from the proposed development to experience significant effects. Potential effects of the proposed 132kV overhead line are identified as potentially significant on two of the assets as

detailed in table 9.2.2 below:

Table 9.2.2 – Assessment of Heritage Assets with Potentially Significant Effects			
STEP 1		STEP 2	STEP 3
Identifying which heritage assets and their settings are affected		Assessing whether, how and to what degree setting makes a contribution to the significance of the heritage asset(s)	Assessing the effect of the proposed development on the significance of the asset(s)
<b>Malt Kiln Farmhouse</b> <b>LB 1056039</b>	<b>Description and key attributes</b> Grade II listed building of two storeys, dating to the late 18 <sup>th</sup> century with later additions and alterations; Historic England's full listing can be found at: <a href="https://historicengland.org.uk/listing/the-list/list-entry/1056039">https://historicengland.org.uk/listing/the-list/list-entry/1056039</a>	<p><b>Significance of the asset</b>            Malt Kiln Farmhouse is considered to be of high significance by virtue of being designated as a listed building, albeit that its grade II status infers that its significance lies towards the lower end of high. The farmhouse primarily derives its significance from the historic, architectural and artistic interest of its built fabric and internal features. The building also derives some significance from its setting.</p> <p>The significance of the farmhouse can be considered to be mostly evidential, with the Historic England listing description highlighting key original architectural details and noting external attributes of this well-preserved vernacular building. The surrounding rural countryside provides further evidential value, in terms of the rural context of the farm buildings. The farm has some illustrative historical value in that it has been adapted through time to suit agricultural developments and illustrates how people lived and worked the land over the past 200 years. The farmhouse has a strong visual presence, notably when approached by road from the south-east, and there is aesthetic value in its classic Georgian form and well-maintained appearance. There is also a strong aesthetic relationship between the house and the older agricultural outbuildings, which are arranged around the courtyard/ farmyard to the north-east of the farmhouse. These outbuildings are well-kempt and relatively unchanged and add to the story of the farm and contribute to the significance of Malt Kiln Farmhouse.</p> <p><b>Setting: Physical surroundings and experience of the asset</b>            The immediate setting of Malt Kiln Farmhouse is represented by its curtilage, including the farmhouse, outbuildings, Dutch barn and other barns, garden, farmyard, adjacent paddocks/ closes, access drive and adjacent lane. The wider farmland setting takes in gently sloping pasture land to the north and north-west up to the parish boundary; extends south-west across arable land towards Wackley Farm and Wackley Lodge on the edge of Petton Park; extends east across agricultural land towards Moor House Farm (but excludes 'The Fields' to the south-west of Loppington); and extends south across agricultural land towards Burlton Grange Farmhouse. Extant boundaries within the wider setting are varied. Most are not marked by hedgerows, and where these exist they are generally poor. The strongest boundaries lie to the north and south and these are generally intact, well-developed hedgerows with moderately frequent trees, some of which are mature.</p> <p>The aspect of Malt Kiln Farmhouse is to the south-east. There is no direct inter-visibility with other designated assets, due to intervening built form, landform and vegetation. Potential distant views to the south-west to Wackley Farmhouse (a listed building) are filtered by hedgerows and trees. In terms of more general views to/from the asset and the wider rural landscape: ground-floor views to the north are blocked by outbuildings/ barns; middle- and distant views to the south, east and west are interrupted/ filtered by hedgerows and trees; middle-distance views across agricultural land to the north-west and north-east from the 2nd storey is partly filtered by mature trees.</p> <p>Malt Kiln Farmhouse has a varied visual connection with the surrounding landscape. The relationship is good to the south and south-east from where the historic character of the farmhouse remains highly recognisable. On its north-east and east sides, the historic farmhouse is somewhat disconnected from its wider setting by modern agricultural buildings, including a Dutch barn, which make it difficult to fully appreciate the farm's aesthetic values in terms of architectural quality and form. Views of the farmhouse from the north-east and east are glimpsed through the Dutch barn or over the outbuildings and overall the visual connection in</p>	<p>The Proposed Development runs north-west to south-east across gently sloping land for c.700m (6 poles) within the wider setting of Malt Kiln Farmhouse, passing at a nearest distance of 128m to the east of the asset. The Proposed Development does not interrupt key views to/from the south and south-east. Proposed access tracks are located within 46m.</p> <p>The Proposed Development is unlikely to be dominant in the landscape on account of its visual permeability, but it would be visible as a series of 'stacked' poles in some views with the farmhouse from the south-east. This might be a visual distraction from appreciation of the farmhouse and understanding of its setting.</p> <p>The route of the Proposed Development partly along a natural dip in the landscape helps to mitigate visual effects. Potential middle-distance views of the Proposed Development from the first floor of the farmhouse to the north-east are filtered by hedgerows and trees, although some sky-lining of poles is likely in views to the north-east. Some poles may be visible to the east, where the Proposed Development has less intervening vegetation.</p>

Table 9.2.2 – Assessment of Heritage Assets with Potentially Significant Effects

STEP 1		STEP 2	STEP 3
Identifying which heritage assets and their settings are affected		Assessing whether, how and to what degree setting makes a contribution to the significance of the heritage asset(s)	Assessing the effect of the proposed development on the significance of the asset(s)
		<p>these directions is in the range poor to moderate.</p> <p><b>Contribution of setting to significance</b> The setting of Malt Kiln Farmhouse contributes to the appreciation of the historic building and its landscape context, and therefore contributes to the asset's significance. Within its immediate setting, the associated historic farm buildings contribute to the architectural and historical interest of the farmhouse and are an important aspect of its significance. The historic field-scapes of the wider setting contribute to the historic interest of the farmhouse and inform its historic agricultural landscape context, albeit that the contribution to significance is reduced somewhat on account of the high boundary loss.</p> <p>Overall, the contribution made by setting to the significance of the farmhouse is considered moderate, being strongest to the south and south-east, where there is a good visual relationship with the farmhouse and being weakest to the north, north-west and north-east where the visual relationship is poor and the sensitivity of the landscape to change is slightly reduced on account of modern buildings and existing low voltage overhead lines.</p>	<p>Overall, there would be long-term change to the eastern setting of Malt Kiln Farmhouse, which would be bisected by the Proposed Development. Despite the reversibility of these effects, the degree of change and proximity to the asset means that the impact on the significance of Malt Kiln Farmhouse is potentially significant.</p>
<b>The Shayes Farmhouse</b>  <b>LB 1056054</b>	<p>Grade II listed building of two storeys and attic with lower range to rear, dating to the late 18<sup>th</sup> century with later additions and alterations; Historic England's full listing can be found at: <a href="https://historicengland.org.uk/listing/thelist/list-entry/1056054">https://historicengland.org.uk/listing/thelist/list-entry/1056054</a></p>	<p><b>Significance of the asset</b> The Shayes Farmhouse is considered to be of high significance by virtue of being designated as a listed building, albeit that its grade II status infers that its significance lies towards the lower end of high. The farmhouse primarily derives its significance from the historic, architectural and artistic interest of its built fabric and internal features. The building also derives some significance from its setting.</p> <p>The significance of the farmhouse can be considered to be mostly evidential, with the Historic England listing description highlighting key original architectural details and noting external attributes of this well-preserved vernacular building. The surrounding rural countryside provides further evidential value, in terms of the rural context of the farm buildings. The farm has some illustrative historical value in that it has been adapted through time to suit agricultural developments and illustrates how people lived and worked the land over the past 200 years. The farmhouse has a moderately strong visual presence and there is aesthetic value in its classic Georgian form and appearance, notably when viewed from the east. There is also a strong aesthetic relationship between the house and the older agricultural outbuildings, which are arranged around the farmyard to the south. These outbuildings add to the story of the development of the farm buildings and contribute to the significance of The Shayes.</p> <p><b>Setting: Physical surroundings and experience of the asset</b> The immediate setting of The Shayes is represented by its curtilage, including the farmhouse, garden, farmyard, dilapidated outbuildings, stables and barns, adjacent road and adjacent lane to Bentley Farm. The wider farmland setting takes in gently sloping land on either side of the adjacent lane. It extends north towards Salters Stables and south towards Noneley, includes the land to Bentley Farm and pasture land on either side to the west of the farmhouse, and extends across mostly arable land to the east towards the River Roden. Extant boundaries within the wider setting are varied but generally moderate to good. Those to the west are predominantly well-defined, intact and benefit from mature trees. Those boundaries to the east are moderately intact and include dispersed trees. Some are marked by wooden post/rail fencing.</p> <p>The aspect of The Shayes is to the north-east. There is direct inter-visibility with two other designated assets, these being the grade I church of St Michael, Loppington (LB 1056050) to the north-west and Noneley Hall Farmhouse (LB 1212197) to the south. Distant views of the church tower are filtered by intervening hedgerows and trees. Middle-distance views of Noneley Hall Farmhouse are</p>	<p>The Proposed Development wraps around the west, north-west, north and north-east sides of The Shayes, crossing for c.1.5km (10-15 poles) across gently sloping land within its wider setting, and passing at a nearest distance of 159m to the west and 191m to the north of the asset. The Proposed Development interrupts a key view of the church of St Michael, Loppington to/from the north-west, which would have greatest effect in the winter months. Proposed access tracks are located within 23m.</p> <p>The Proposed Development is unlikely to be dominant in the landscape on account of its visual permeability.</p> <p>The route of the Proposed Development helps to mitigate visual effects. Middle-distance views of c.500m of the proposed overhead line to the north and west are slightly filtered by intervening</p>

**Table 9.2.2 – Assessment of Heritage Assets with Potentially Significant Effects**

STEP 1		STEP 2	STEP 3
Identifying which heritage assets and their settings are affected		Assessing whether, how and to what degree setting makes a contribution to the significance of the heritage asset(s)	Assessing the effect of the proposed development on the significance of the asset(s)
		<p>restricted to its chimney stacks on account of intervening built-form. In terms of more general views to/from the asset and the wider rural landscape: ground-floor views to the south, south-west and south-east are blocked by stables, barns and outbuildings and ground floor views to the north and north-west are blocked by a conifer hedge and modern barns. Views to the east and north-east are generally open and partly filtered by hedgerows and mature trees. To the rear (west) of the farmhouse, there is an open view, albeit narrow. There are moderately good views to/from the upper storeys to the north and north west over the conifer hedge and modern barns.</p> <p>The Shayes has a varied visual connection with the surrounding landscape. The visual relationship is strongest to the east and north-east from where the historic character of the farmhouse remains highly recognisable. Modern agricultural barns to the south and west, and the conifer hedge to the north enclose the farmhouse and its associated historic buildings on these sides, disconnecting them somewhat from their surroundings and making it difficult to fully appreciate the farm's aesthetic values in terms of architectural quality and form. Despite this, and the sometimes narrow and some of the height restricted views of the farmhouse to/from the north, west and north-west, the overall visual connection in these directions although sometimes poor is generally moderate.</p> <p><b>Contribution of setting to significance</b> The setting of The Shayes contributes to the appreciation of the historic building and its landscape context, and therefore contributes to the asset's significance. Within its immediate setting, the associated historic farm buildings to the south contribute to the architectural and historical interest of the farmhouse and therefore are an important aspect of its significance. The historic field-scapes of the wider setting contribute to the historic interest of the farmhouse and inform its historic agricultural landscape context, albeit that the contribution to significance is reduced somewhat on account of some boundary loss within the setting.</p> <p>The sensitivity of the landscape to change is reduced on account of the modern buildings and existing low voltage overhead lines to the east, north and north-west, and the presence of a large modern lake/ reservoir to the north-east. Overall, the contribution made by setting to the significance of the farmhouse is considered to be in the range poor to moderate, being strongest to the east and north-east, where there is good visual relationship with the farmhouse and weakest to the south where there is poor visual relationship between the historic buildings and the historic landscape.</p>	<p>vegetation and backdropped against hedgerows and mature trees. Some poles may be visible and sky-lined to the north-east, where the Proposed Development has less intervening vegetation, but routeing along a natural dip in the landscape helps to alleviate visual impacts and reduces the visual distraction from appreciation of the farmhouse and understanding of its setting.</p> <p>The effects of the new 132kV line would be combined with those of the existing 32kV line, on account of the doubling up of poles and wires. This would mainly occur in views to the north and less so in views to the west and north east, where the existing 32kV line is less visible.</p> <p>Overall, there would be long-term change to the northern and western setting of The Shayes, which would be bisected by the Proposed Development. Despite the reversibility of these effects, the degree of change, interruption of inter-visibility with another designated asset, general proximity to The Shayes and potential cumulative effects with existing overhead lines means that the impact on the asset is potentially significant.</p>

## APPENDIX 9.3

# HISTORIC ENVIRONMENT HERITAGE ASSET TABLES

## APPENDIX 9.3:

### HISTORIC ENVIRONMENT HERITAGE ASSET TABLE

#### 1.1 INTRODUCTION

- 1.1.1 This appendix presents the heritage assets within the study areas. The table is ordered by the primary reference and provides a brief description, designation status, the significance of the asset, whether the predicted effect is significant or not, the location and distance from the various components of the proposed development.

# APPENDIX 9.4

## HISTORIC ENVIRONMENT VIEWPOINT SCHEDULE

## APPENDIX 9.4:

### HISTORIC ENVIRONMENT VIEWPOINT SCHEDULE

#### 1.1 INTRODUCTION

- 1.1.1 This appendix presents the heritage assets viewpoints. The table is ordered by the viewpoint reference number (1-24, from west to east) and provides the name of the heritage asset(s) to which the viewpoint relates, the location of the viewpoint in relation to the asset(s), the NGR and direction of view. The location of the viewpoints is shown on Figure 9.1 'Heritage Assets, Historic Environment Study Area and Viewpoints'.
- 1.1.2 The viewpoints assist in the understanding of effects on important heritage assets and their settings. It is important to understand that historic environment viewpoints cannot capture the totality of potential impacts on setting and therefore they are not assessed for impacts in and of themselves.
- 1.1.3 An initial schedule of 26 viewpoints was agreed with Shropshire Council prior to the scoping opinion, this has now been reduced to 24 as the route of the Proposed Development has changed and some of the original viewpoints were no longer relevant.

Table 9.4.1: Historic Environment Viewpoint Schedule					
Viewpoint No.	Heritage Asset	Location	Easting	Northing	Looking
1	Old Oswestry Iron Age Hillfort (SM 1014899)	E edge of hillfort	329790	331030	ESE
2	Wat's Dyke (SM 1014899, SM 1020564, SM 1020619)	Wat's Dyke, N of Old Oswestry Hillfort	329670	331510	ESE
3	Wat's Dyke (SM 1020564)	Wat's Dyke, S of Old Oswestry Hillfort (possible VP)	329680	329720	E
