

Connections Metering Process Overview

SP Energy Networks are the Distribution Network Operator (DNO) for Central and Southern Scotland, Merseyside, Cheshire, North Shropshire and North Wales.

If you are requesting a connection in any of these areas you will need to follow the metering connection process detailed in this leaflet.

As well as contacting SP Energy Networks - you will also need to nominate your chosen Electricity Supplier and Meter Operator.

SP Energy Networks will not be your electricity supplier and they are not able to provide you with your meter.

A full list of Electricity Suppliers can be found on the back of this leaflet.

A Meter Operator (MOP) will provide you with a meter for your new connection.

Once you have agreed and accepted your new connection you will need to contact your chosen electricity supplier. This electricity supplier will ask you to nominate your chosen MOP.

Your own electrician will also be required to complete the works when connecting CT Metering.

Please refer to the Connection Metering Process flowcharts overleaf for further guidance on the type of metering you would like to connect.
