Appendix 7.1: Designated Heritage Assets Setting Assessment Tables

SPEN

Scoop Hill 132kV Connection Project

Appendix 7.1: Designated Heritage Assets Setting Assessment Tables

Final report
Prepared by LUC
November 2023

Table A.1: Assessment Table for Scheduled Monuments within the Inner (bold) and Outer Study Areas

Designation Reference	Heritage Asset Name	Screened In/Out	Reasoning
SM12736	Catharine's Hill, settlement 620m N of Nether Murthat	Out	The elements of the setting of this heritage asset which contribute most to how it is understood, appreciated and experienced as a late prehistoric defended settlement which may have been designed to control access and observe movement along the River Annan and Annandale are; its location on an area of raised ground forming Catharine's Hill (105 m AOD); the bend in the River Annan to the west; views from the asset across and over the river valley, as well as to the north and south; access to the fertile valley bottom which would have influenced the placement of this asset in the landscape. The spatial relationship with other contemporary assets in the wider landscape also has the potential in inform the understanding of the distribution of late prehistoric settlements and land distribution in the Annandale. While the Scoop Hill 132kV Connection Project on the hillside above the asset will be observable in views to the east and north east, it will be seen in the context of exiting electricity infrastructure (pylons) and these are not key views in understanding the placement in the asset in the landscape. The spatial relationship with other contemporary assets in the wider landscape will be maintained, along with its elevated riverside defendable position within an area of fertile agricultural land will not be affected, or the way these element of its setting contribute to it cultural significance. In addition, the cultural significance is predominantly derived from its physical remains (evidence and historic value) and their potential to contribute to the knowledge and understanding of late prehistoric settlement and society.
SM12697	**Poldean, standing stone 110m SSW of**	Out	The current setting of this heritage asset comprises its location within an agricultural field within the floodplain of the River Annan, and adjacent to the Poldean Farm complex. Its location within the Annandale and spatial relationship with other contemporary prehistoric ritual monuments in the wider landscape are important elements of its setting. While the Scoop Hill 132kV Connection Project on the hillside above the asset will be observable in glimpsed views to the north and north east, topography and planation screening will largely limit intervisibility, and any glimpsed views will be seen in the context of exiting electricity infrastructure (pylons) and these are not key views in understanding the placement in the asset in the landscape. The presence of the Scoop Hill 132kV Connection Project in the landscape does not have the potential to affect the cultural significance of this heritage asset and the way its current setting contributes to how it is understood, appreciated or experienced as a prehistoric ritual moment.

Designation Reference	Heritage Asset Name	Screened In/Out	Reasoning
SM12614	Benoaks, stone row 150m N of	Out	The current setting of this heritage asset comprises its location on the roadside verge between the A701 and a farm track. The movement of vehicles and road traffic noise form part of its setting. Its location within the Annandale and spatial relationship with other contemporary prehistoric ritual monuments in the wider landscape are important elements of its setting. Given its roadside location this asset's immediate setting dose not significantly contribute to the way it is understood, appreciated and experienced as a prehistoric ritual monument. The presence of the Scoop Hill 132kV Connection Project in the wider landscape will not alter the contribution its spatial relationship with other contemporary prehistoric monuments and its location within Annandale makes to its cultural significance.
SM2197	Knock Hill, fort 1200m WSW of Kirkpatrick-Juxta Church	Out	The elements of the setting of this heritage asset which contribute most to how it is understood, appreciated and experienced as a late prehistoric hillfort which may have been designed to control access and observe movement along the River Annan and Annandale are; its prominent easily defendable location on Knock Hill (238m AOD) above Annandale; views from the asset across and over the river valley, as well as to the north and south along the course of the River Annan. The spatial relationship with other contemporary assets in the wider landscape also has the potential to inform the understanding of the distribution of late prehistoric hillforts, settlement and land distribution in the Annandale. While the Scoop Hill 132kV Connection Project on opposing hillside will be observable in views to the east, it will be seen in the context of exiting electricity infrastructure (pylons) and the intervisibility with Dod Hill enclosure (MDG407) and Beattock Hill, fort (SM4748), and the spatial relationship with other contemporary assets in the wider landscape will be maintained. The ability to understand, appreciate and experience the choice of a defensible position and the ability of the occupants to observe and provide a level of control over movement through Annandale will not be affected. In addition, the cultural significance is predominantly derived from its physical remains (evidence and historic value) and their potential to contribute to the knowledge and understanding of late prehistoric defended enclosures, settlement and society.
SM676	**Milton, Roman fort, fortlet & camps**	In	The presence of the Scoop Hill 132kV Connection Project in the landscape has the potential to affect the cultural significance of this heritage asset and the way its current setting contributes to how it is understood, appreciated or experienced as a pre-Roman defended enclosure and later Roman fort and fortlets.

Designation Reference	Heritage Asset Name	Screened In/Out	Reasoning
SM4748	Beattock Hill, fort and unenclosed settlement 935m W of Braeside	Out	The elements of the setting of this heritage asset which contribute most to how it is understood, appreciated and experienced as a late prehistoric hillfort defended enclosure are, its prominent easily defendable location on Beattock Hill (259m AOD) above Annandale; views from the asset across and over the river valley, as well as to the north and south along the course of the River Annan. The spatial relationship with other contemporary assets in the wider landscape also has the potential to inform the understanding of the distribution of late prehistoric defended enclosures, settlement and land distribution in the Annandale. The Scoop Hill 132kV Connection Project will be only just observable in views to the south-east and will be seen in the context of exiting electricity infrastructure (pylons) and the intervisibility with Knock Hill, fort (SM2197) and the spatial relationship with other contemporary assets in the wider landscape will be maintained. The ability to understand, appreciate and experience the choice of a defensible position and the ability of the occupants to observe movement through Annandale will not be affected. In addition, the cultural significance is predominantly derived from its physical remains (evidence and historic value) and their potential to contribute to the knowledge and understanding of late prehistoric defended enclosures, settlement and society.
SM3347	Coatshill Quarry to Holehouse Linn, Roman Road.	Out	The key elements of the setting of this section of Roman road which contribute most to its cultural significance and how it is understood, appreciated and experienced are: its alignment just off the north-east facing ridge above Annandale; views along the alignment of the road and down into the valley below; and the spatial relationship with the conjectural alignment of the Roman road to the south and north and with other Roman military installations, including the Milton, Roman fort, fortlet & camps (SM676) to the south. The presence of the Scoop Hill 132kV Connection Project will not alter the way the current setting of the Roman road, contributes to how it is understood, appreciated or experienced as part of the wider road network and other contemporary assets including Milton, Roman fort, fortlet & camps (SM676). In addition, the cultural significance of this asset is predominantly derived from its physical remains (evidence and historic value) and their potential to contribute to the knowledge and understanding of Roman road construction techniques, transport systems and the Roman military occupation of Scotland.
SM12664	Craigbeck Hope, burnt mound 1100m SW of	Out	No intervisibility with the Scoop Hill 132kV Connection Project. The setting of this heritage asset does not extend as far as the Scoop Hill 132kV Connection Project.

Designation Reference	Heritage Asset Name	Screened In/Out	Reasoning
SM10789	Beattock Hill, settlement 700m W of Hillside Cottages	Out	No intervisibility with the Scoop Hill 132kV Connection Project. The setting of this heritage asset does not extend as far as the Scoop Hill 132kV Connection Project.

Table A.2: Assessment Table for Listed Buildings within the Inner (bold) and Outer Study Areas

Designation Reference	Heritage Asset Name	Category	Screened In/Out	Reasoning
LB16856	Dumcrieff House	B	Out	The setting of this heritage asset does not extend as far as the Scoop Hill 132kV Connection Project. While this heritage asset is identified as having theoretical visibility with the Scoop Hill 132kV Connection Project, views towards the Scoop Hill 132kV Connection Project from this asset will be restricted by existing mature woodland forming the gardens associated with Dumcrieff House.
LB9905	Beattock Village, Beattock Bridge	B	Out	The setting of this heritage asset does not extend as far as the Scoop Hill 132kV Connection Project.
LB9844	Craigielands, North Lodge And Gatepiers	B	Out	The setting of this heritage asset does not extend as far as the Scoop Hill 132kV Connection Project. While this heritage asset is identified as having theoretical visibility with the Scoop Hill 132kV Connection Project, views south-east towards the Scoop Hill 132kV Connection Project from this asset will be restricted by existing mature woodland forming the garden and designed landscape associated with Craigielands House.
LB16848	Breckonside Tower	C	Out	The presence of the proposed OHLScoop Hill 132kV Connection Project in the landscape does not have the potential alter the way the current setting of Breckonside Tower is understood or appreciated. While this heritage asset is identified as having theoretical visibility with the Scoop Hill 132kV Connection Project, views towards the proposed OHLScoop Hill 132kV Connection Project from this asset will be restricted by existing mature woodland and boundary screening. Any intervisibility will not affect the cultural significance of this heritage asset and the way its current setting

Designation Reference	Heritage Asset Name	Category	Screened In/Out	Reasoning
				contributes to how it is understood, appreciated or experienced as a late medieval / early post-medieval tower house.
LB16788	Stenrieshill Farmhouse, Steading And Horsemill And Gatepiers	B	Out	The setting of this heritage asset does not extend as far as the Scoop Hill 132kV Connection Project. While this heritage asset is identified as having theoretical visibility with the Scoop Hill 132kV Connection Project, views towards the Scoop Hill 132kV Connection Project from this asset will be restricted by existing mature woodland circling the farmstead.
LB9845	Craigielands South Lodge And Gatepiers	B	Out	The setting of this heritage asset does not extend as far as the Scoop Hill 132kV Connection Project. While this heritage asset is identified as having theoretical visibility with the Scoop Hill 132kV Connection Project, views south-east towards the Scoop Hill 132kV Connection Project from this asset will be restricted by existing mature woodland forming the garden and designed landscape associated with Craigielands House.
LB9893	Langshawbush House, Coach House And Gatepiers	B	Out	The setting of this heritage asset does not extend as far as the Scoop Hill 132kV Connection Project. While this heritage asset is identified as having theoretical visibility with the Scoop Hill 132kV Connection Project, views towards the Scoop Hill 132kV Connection Project from this asset will be limited by the existing buildings and infrastructure.
LB9894	Lochhouse Tower	B	Out	The setting of this heritage asset does not extend as far as the Scoop Hill 132kV Connection Project. While this heritage asset is identified as having theoretical visibility with the Scoop Hill 132kV Connection Project, the Scoop Hill 132kV Connection Project will not be dominate in views towards it and will be seen in the context of existing infrastructure from the asset are restricted by other farm buildings at Dyke farm and mature garden trees.
LB13324	Skellywell Mill	C	Out	The setting of this heritage asset does not extend as far as the Scoop Hill 132kV Connection Project. While this heritage asset is identified as having theoretical visibility with the Scoop Hill 132kV Connection Project, views towards it from the asset include the embankments and cutting of Junction 15 of the A74 (M).
LB9843	Craigielands, Ice House	C	Out	The setting of this heritage asset does not extend as far as the Scoop Hill 132kV Connection Project. While this heritage asset is identified as having theoretical visibility with the Scoop Hill 132kV Connection Project, views south-east towards the Scoop Hill 132kV Connection Project

Designation Reference	Heritage Asset Name	Category	Screened In/Out	Reasoning
				from this asset will be restricted by existing mature woodland forming the garden and designed landscape associated with Craigielands House.
LB9848	Dyke Farmhouse	C	Out	The setting of this heritage asset does not extend as far as the Scoop Hill 132kV Connection Project. While this heritage asset is identified as having theoretical visibility with the Scoop Hill 132kV Connection Project, views towards it from the asset will be restricted by other farm buildings at Dyke farm and mature garden trees.
LB9850	Kirkpatrick-Juxta Parish Church And Churchyard	B	Out	The setting of this heritage asset does not extend as far as the Scoop Hill 132kV Connection Project. While this heritage asset is identified as having theoretical visibility with the Scoop Hill 132kV Connection Project, views south-east towards the Scoop Hill 132kV Connection Project from this asset will be restricted by the embankment of the A74 (M) and the functional relationship with other assets associated Kirkpatrick-Juxta Parish Church will not be affected.
LB9891	Kirkpartrick Juxta Parish Manse	C	Out	The setting of this heritage asset does not extend as far as the Scoop Hill 132kV Connection Project. While this heritage asset is identified as having theoretical visibility with the Scoop Hill 132kV Connection Project, views south-east towards the Scoop Hill 132kV Connection Project from this asset will be restricted by the embankment of the A74 (M) and the functional relationship with other assets associated Kirkpatrick-Juxta Parish Church will not be affected.
LB9892	Kirkpatrick Juxta Former Parish Manse And Outbuildings	C	Out	The setting of this heritage asset does not extend as far as the Scoop Hill 132kV Connection Project. While this heritage asset is identified as having theoretical visibility with the Scoop Hill 132kV Connection Project, views south-east towards the Scoop Hill 132kV Connection Project from this asset will be restricted by the embankment of the A74 (M) and the functional relationship with other assets associated Kirkpatrick-Juxta Parish Church will not be affected.
LB9892	Kirkpatrick Juxta Former Parish Manse And Outbuildings	C	Out	The setting of this heritage asset does not extend as far as the Scoop Hill 132kV Connection Project. While this heritage asset is identified as having theoretical visibility with the Scoop Hill 132kV Connection Project, views south-east towards the Scoop Hill 132kV Connection Project from this asset will be restricted by the embankment of the A74 (M) and the functional relationship with other assets associated Kirkpatrick-Juxta Parish Church will not be affected.

Designation Reference	Heritage Asset Name	Category	Screened In/Out	Reasoning
LB9846	Craigielands, Walled Garden And Gardener's House And Semi-Domed Alcove	B	Out	The setting of this heritage asset does not extend as far as the Scoop Hill 132kV Connection Project. While this heritage asset is identified as having theoretical visibility with the Scoop Hill 132kV Connection Project, views south-east towards the Scoop Hill 132kV Connection Project from this asset will be restricted by existing mature woodland forming the garden and designed landscape associated with Craigielands House.
LB9846	Craigielands, Walled Garden And Gardener's House And Semi-Domed Alcove	B	Out	The setting of this heritage asset does not extend as far as the Scoop Hill 132kV Connection Project. While this heritage asset is identified as having theoretical visibility with the Scoop Hill 132kV Connection Project, views south-east towards the Scoop Hill 132kV Connection Project from this asset will be restricted by existing mature woodland forming the garden and designed landscape associated with Craigielands House.
LB9896	Milton Farmhouse	C	Out	The setting of this heritage asset does not extend as far as the Scoop Hill 132kV Connection Project. While this heritage asset is identified as having theoretical visibility with the Scoop Hill 132kV Connection Project, views south-east towards the Scoop Hill 132kV Connection Project from this asset will be limited by the existing farm buildings and mature tree planting.
LB9840	Beattock Village, Beattock School	C	Out	The setting of this heritage asset does not extend as far as the Scoop Hill 132kV Connection Project. While this heritage asset is identified as having theoretical visibility with the Scoop Hill 132kV Connection Project views south-east towards the Scoop Hill 132kV Connection Project from this asset will be blocked by existing infrastructure including the A74 (M).
LB9906	Beattock Village, Beattock House Hotel And Gatepiers To North And To South	B	Out	The setting of this heritage asset does not extend as far as the Scoop Hill 132kV Connection Project. While this heritage asset is identified as having theoretical visibility with the Scoop Hill 132kV Connection Project, views south-east towards the Scoop Hill 132kV Connection Project from this asset will be limited by the embankment of the A74 (M) and mature woodland forming the setting of the hotel.
LB9908	Beattock Village, The Old Brig Inn, Hotel And Outbuildings	A	Out	The setting of this heritage asset does not extend as far as the Scoop Hill 132kV Connection Project. While this heritage asset is identified as having theoretical visibility with the Scoop Hill 132kV Connection Project views south-east towards the Scoop Hill 132kV Connection Project from this asset will be limited by the embankment of the A74 (M) and mature woodland forming the setting of the hotel.

Designation Reference	Heritage Asset Name	Category	Screened In/Out	Reasoning
LB9908	Beattock Village, The Old Brig Inn, Hotel And Outbuildings	A	Out	The setting of this heritage asset does not extend as far as the Scoop Hill 132kV Connection Project. While this heritage asset is identified as having theoretical visibility with the Scoop Hill 132kV Connection Project views south-east towards the Scoop Hill 132kV Connection Project from this asset will be limited by the embankment of the A74 (M).
LB9839	Beattock Village, Former Stationmaster's House	B	Out	The setting of this heritage asset does not extend as far as the Scoop Hill 132kV Connection Project. While this heritage asset is identified as having theoretical visibility with the Scoop Hill 132kV Connection Project views south-east towards the Scoop Hill 132kV Connection Project from this asset will be blocked by existing infrastructure including the A74 (M).
LB9842	Craigielands House	A	Out	The setting of this heritage asset does not extend as far as the Scoop Hill 132kV Connection Project. While this heritage asset is identified as having theoretical visibility with the Scoop Hill 132kV Connection Project, views south-east towards the Scoop Hill 132kV Connection Project from this asset will be restricted by existing mature woodland forming the garden and designed landscape associated with Craigielands House.
LB9847	Craigielands, Former Stables	B	Out	The setting of this heritage asset does not extend as far as the Scoop Hill 132kV Connection Project. While this heritage asset is identified as having theoretical visibility with the Scoop Hill 132kV Connection Project, views south-east towards the Scoop Hill 132kV Connection Project from this asset will be restricted by existing mature woodland forming the garden and designed landscape associated with Craigielands House.
LB9907	Beattock Village, Evan Bridge	C	Out	No intervisibility with the Scoop Hill 132kV Connection Project. The setting of this heritage asset does not extend as far as the Scoop Hill 132kV Connection Project.
LB16855	Dumcrieff Bridge	C	Out	No intervisibility with the Scoop Hill 132kV Connection Project. The setting of this heritage asset does not extend as far as the Scoop Hill 132kV Connection Project.
