

Are you planning any of the following...?

- conservatory ● extension ● garage ● decking ● fencing ●
- landscaping ● erecting marquees ● property development ●

Do you know where your underground services are?

Electricity, gas, water and telecoms could be within your property boundary.

Before commencing any excavations it would be advantageous for you to contact your local utility companies and ask for the location of any underground services and apparatus on your property.

SP Energy Networks cable records are available on application.

Remember, when planning permission has been granted from your local authority, this **DOES NOT MEAN** contact has been made with utility companies. It is the applicant's/architect's/ builder's responsibility to seek advice regarding cable records and possible cable diversions **before** excavations commence.

Comprehensive advice is available from the Health & Safety Executive (HSE) via www.hsebooks.co.uk. This leaflet should be used in conjunction with Health and Safety Executive (HSE) Guidance Note HS(G)47, "Avoiding Danger from Underground Services".

To ensure everyone's safety when excavating around underground services strict adherence to HS(G)47 is strongly recommended

Example of SP Energy Networks cable records highlighting cable routes

Information required to progress enquiry:

- **Please mark as "deviation work request"**
- Location Map
- Location Details (Including postcode and X, Y co-ordinates, if possible)
- Applicants Details (full address and contact details)
