

SCHOOLS COMPETITION

This is your chance to
become your school
PowerWise champion

To be in with a chance of winning an iPad mini for your school and to star in an exciting power safety video, we want you to get creative and draw some electrifying masterpieces.

Electricity has quite a journey before reaching your home. From wind turbines and power stations to substations and overhead lines, it takes a lot of equipment to get electricity to your home.

Draw how power reaches your home.

During a power cut, it's important to stay calm and stay safe. Ask an adult to check whether nearby houses or buildings have power and, if not, they need to let the engineers at **SP Energy Networks** know by calling **105**.

It's also very important for everyone to stay safe and you can help by reminding grown-ups to switch everything off while the engineers get your power back on and listening carefully for instructions to keep safe.

Draw how you can stay safe in a power cut.

**POWER CUT?
CALL 105**

In the event of a power cut, you should call **105** to report the problem.
