

Smeaton 132kV Substation Extension

Pre-application Consultation event

Scottish Power Energy Networks is holding a drop-in Pre-Application Consultation (PAC 1) exhibition on our proposals to extend the existing 132kV substation at Smeaton. To support the connection of renewable developments in the area, we are required to extend the existing platform at Smeaton substation. This will allow for the installation of an additional bay to accommodate new electrical equipment.

This first stage of consultation will provide information on the design and planning process, environmental and engineering considerations and visual material showing the proposed works.

Our aim is to give stakeholders and community members a clear understanding of the project's development so far.

Date	30th September 2026	1st October 2026
Time	4pm to 7:30 pm	10am to 3pm
Location	Cousland Village Hall	Whitecraig Village Hub

Who are we?

SP Energy Networks operates, maintains, and develops the network of cables overhead lines and substation, which transport electricity to connected homes and businesses in central and southern Scotland.
