

Getting your meter connected

**SP ENERGY
NETWORKS**

You have the choice...

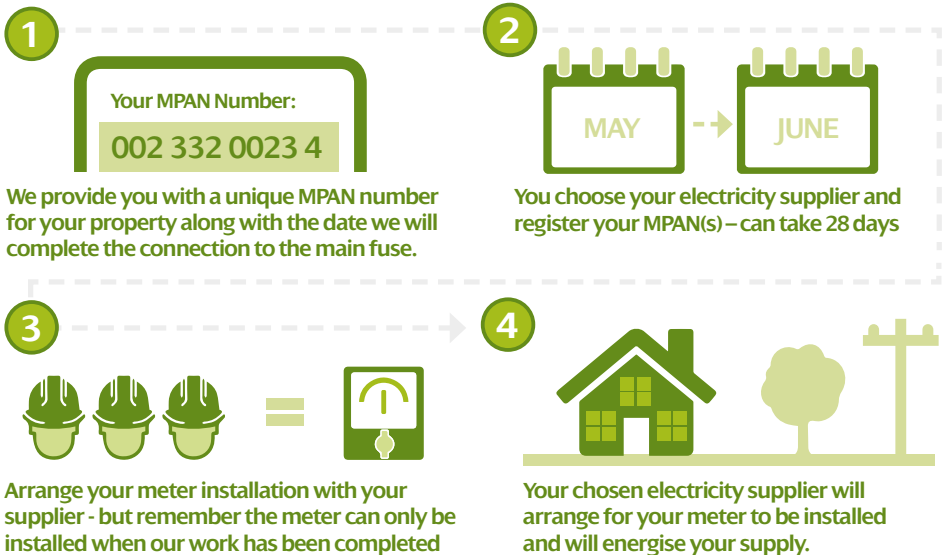

At SP Energy Networks we provide a connection from our electricity network up to the mains fuse (also known as the 'cut out' or the 'cablehead').

It's important to note that we don't provide or connect the electricity meter. That's the job of your electricity supplier – the company that will send you a regular electricity bill. You can find out more about choosing an electricity supplier at ofgem.gov.uk

Once you have accepted and paid our connection quotation we will provide

you with a Meter Point Administration Number (MPAN) and a date for connection of the new cable. Your chosen electricity supplier will need this information in order to fit your meter. You must register your MPAN at least 15 days prior to a domestic connection and 28 days prior to a non-domestic connection.

The meter connection process

The space you'll need for your new meter will depend on whether your property is domestic or commercial. Your project manager will discuss exactly what space is needed at the start of the works.

Meanwhile, please refer to the 'Your Responsibilities' section of your electrical connection quotation – it'll explain what the requirements are.
