You Said, We Did

Feedback	Action
Stakeholders are looking for more information and engagement on electric vehicles	We are holding an electric vehicle event in Sept in Glasgow and have invited Transport Scotland to present to our stakeholders to provide further information
SPEN should be educating and supporting businesses with regards to going green	We are calling for business, local authorities and public bodies to invest in green technology as part of our commitment to support Government climate change targets. We have also announced a further investment this quarter from our Green Economy Fund for projects that support the low carbon economy.
Stakeholders are looking to get involved and be informed with flexibility opportunities	We have now agreed consent with a number of stakeholders to take part in a trial of our new IT platform (FUSION) for flexibility in the St Andrews area
SPEN should have a framework in place for Smart Cities	We are now exploring the Sustainable cities and communities: ISO 37106 to build into our agenda and influence our engagement within our cities.
