

Case Study: Demolition Of Building With Live Electrical Supply

The above image highlights a situation which occurs on a regular basis, live electrical supply while demolition is carried out.

The property in the process of being demolished had a live electrical supply, during the demolition process. The electrical supply was damaged with the possibility of injuries occurring to an operative both, during and after the demolition operation.

When electrical disconnection's are required on any project, disconnections should always be requested timeously and written confirmation sought from the electrical supplier that the property has had all electrical supplies terminated prior to demolition works progressing.

Apply to the electricity supplier to progress Disconnection request. Find your electricity supplier contact: MPAS on 08452 709 101

Case Study: Demolition of properties with live electrical supplies

The above image highlights a situation where a garage was in the process of being demolished, exposing a live electrical cable head covered with a plastic bag.

This poor practice was an attempt to protect the live cable head and is not an acceptable form of protection. The cable head requires to be lock fast and watertight to protect the contractor undertaking the works and the general public from coming into contact with the live electrical supply. Service disconnections should always be requested and written confirmation sought from the electrical supplier that the service has been terminated prior to demolition works commencing.

Apply to electricity supplier to progress disconnection request
